To: Professor Vasily Sukhorukov,
President Intron Plus Ltd., Moscow, Russia

Nov 09, 2010

Dear Professor Sukhorukov,

In July 2010 Intron Plus has successfully completed non-destructive inspection of suspended wire ropes installed at Yongjong Grand Bridge in Seoul, South Korea. The inspection has been done with wire rope tester Intros developed and manufactured by Intron Plus.

Each member of Intron's team, who arrived to Korea for this job, was certified under EN 473 and was well educated and experienced with wire ropes non-destructive testing. The inspection was well organized and completed dead on time. The wire rope tester Intros performed high accuracy and sensitivity. People from Honglim who joined Intron for this job were really satisfied with quality and speed of the job.

I am looking forward to continue successful cooperation with Intron Plus for further inspection of ropes either of bridges or other installations.
