Dear Professor Sukhorukov,

Herewith I wish state some points of cooperation between DMT GmbH and INTRON PLUS.

You know that DMT GmbH is an independent engineering and consulting company which in particular concentrates in product and industrial testing, and measuring technology. Rope Testing Centre is a part of DMT and includes Testing Laboratory for non-destructive and destructive testing (NDT & DT) of ropes. We have great experience with NDT & DT of mining ropes, bridge ropes, civil engineering ropes, etc. Since 1998 we have been using the rope testers INTROS, manufactured by your company. We use these testers for NDT of ropes with diameters from 6 to 150 mm in different industries not only in Germany, but in many other countries.

INTROS made a good showing for different application and satisfied most of our needs. Maintenance of these instruments is rather good and we always get prompt advice from INTRON team when we need it.

After years of cooperation with INTRON PLUS I can say that your company is very experienced in NDT, in particular in development of rope NDT instrumentation, inspection of ropes. On our initiative DMT and INTRON PLUS successfully completed several technical projects for development of new instruments as well as for upgrade of existing systems intended for rope NDT. Good cooperation with INTRON PLUS resulted joint participations in the international conferences and exhibitions.

I wish to thank you for fruitful cooperation and looking forward for new successful projects.

Kind regards,

Dipl.-Ing. O. Gronau

Head of Testing Laboratory NDT & DT -Rope Testing Centre-
