Alexander Mironenko

Dear Alexandr.

It has now been a period of one year since we received the first class training from yourself on the EMAG equipments as supplied by INTRONS.

During this period the equipment and technicians have been kept constantly busy attending to our customer's requirements throughout the Middle East and South East Asia.

Worthy of particular mention is the portability of the equipment. Due to its robust but relatively light weight its easy to man carry and any freight costs are kept low.

The function of the equipment is however its main strength, being extremely user friendly and accurate means both technicians and clients are more than satisfied. This for us is critical for the development of EMAG in our field. Other machines we looked at when entering the EMAG field did not compare on any level to the INTRONS brand. As a result we are extremely satisfied with the excellent INTRONS equipments.

We hope in the future to be in a position to add additional INTRONS equipments to our growing inspection division.

Thank you again for the superb equipment, training and technical support.

Best regards
